

# Which Chair Offers The Best Overall Reduced Seated Pressure? BODYBILT®

*Reduced seated pressure is what allows someone to sit in their chair for an extended period of time. The lower the pressure; the greater the comfort and the longer one may sit comfortably. Comfort with ergonomics equals increased productivity. BodyBilt Seating is the leader in ergonomic seating.*

## Pressure Distribution Mapping of Office Task Seating

|   | Humanscale Freedom | Herman Miller Mirra | Haworth Zody | Herman Miller Aeron | Steelcase Leap | BodyBilt J2507 |
|---|--------------------|---------------------|--------------|---------------------|----------------|----------------|
| 1) a petite individual (BMI=18.5)         |                    |                     |              |                     |                |                |
| 2) an average individual (BMI=19.5)       |                    |                     |              |                     |                |                |
| 3) a large individual (BMI=47)            |                    |                     |              |                     |                |                |
| Peak Pressure Average Across All Subjects | 10.3               | 14.3                | 12           | 15                  | 11.3           | 8.3            |
